

INTUBATION KIT FOR RATS

Ordner No. on request

- Stainless steel
- autoclavable

- The animal does not need to be immobilised (less damage to the jaw)
- The tongue remains free (you do not need to manipulate it manually)
- A second person is not required to assist with handling
- Thanks to the possibility of integrated lighting, the internal structures are clearly visible
- All edges are polished to prevent injury to the animal
- The procedure is quick and easy
- It reduces the training time needed to perform the procedure correctly
- It can also be used on other types of rodents in veterinary clinics
